

Proposal #2493

Segmentation, Equity, & Brand Strategy

Initial Approach

November. 11. 2024:

Project Understanding and Initial Project Approach

Sailvan Times has asked InnoG to help them conduct a series of consumer and brand research initiatives for their portfolio of brands. Sailvan has succeeded in cross-border e-commerce and now seeks a deeper understanding of the audiences and brand positioning for three of the brands in their portfolio, CooFandy, Ekouaer & Airshiner. Each of three e-commerce brands are currently selling on Amazon, Wish, and TikTok. Amazon is their primary channel at 80% with the remaining

To enable the intensive brand and consumer understanding Sailvan is seeking, it's imperative to start at the beginning, understanding their who, identifying their prime prospect and digging into the core brand attributes that they identify with. This proposal is focused on conducting segmentation research for the three brands.

Given that each of the three brands have distinctly different audiences, Men/ Women who shop for Men, Women, and Moms, we recommend that we break this project into three distinct research work streams.

We suggest a slightly staggered approach for this project, with an initial get smart phase that includes general industry understanding and stakeholder interviews, followed by the three workstreams for each of the three brands with a short lag, 3 weeks, before the launch of each segmentation workstream.

COOFANDY

Research Objectives for CooFandy, Ekouaer, & Airshiner Brands

Innovation Guild, InnoG, will conduct a comprehensive segmentation research initiative, combining qualitative and quantitative methods, to:

- Identify and deeply understand each brand's target audience segments, identifying the prime prospect, focusing on behaviors, motivations, and key demographics.
- Map the consumer journey, including:
 - **Information Sources:** Where does our target find information on products in this category?
 - **Purchase Consideration:** Where do they evaluate and consider brand offers?
 - **Purchase Behavior:** Which brands, and where, are they currently purchasing?
 - **Market Size:** Size each segment's potential to maximize reach and value.
 - **Initial brand Understanding/ Equity:** explore and attempt to identify each brand's potential equities with target segment(s)

Sailvan has established initial branding for these brands via their websites, Amazon stores, social media, and influencer partnerships. Building on this, along with competitive analysis and input from Sailvan stakeholders, we'll define a preliminary brand positioning for each, addressing both emotional and functional aspects. In qualitative research, we'll identify core brand equities to refine the ideal brand positioning and develop an alternative. Both will then be tested in the quantitative phase of the segmentation study.

Using the quantitative results and prime prospect segmentation, we'll finalize the brand's lead positioning, encompassing promise, strategy, narrative, and messaging.

In the Next Phase of Research : We'll conduct focused qualitative research with the prime prospect to refine each brand's key elements (equities, visuals, benefits) for optimal emotional and practical resonance.

Next, we'll validate each brand with a broader audience through quantitative testing to measure strength and purchase intent, delivering a proven and fully realized brand strategy, narrative, and messaging. While this work is underway, we can also begin researching the ideal product range and pricing for each brand.

Scope and Project Approach

These brands have seen strong growth over the past few years, and now Sailvan is ready to take the next step—building a deeper connection with their core audience.

By understanding who their prime customers are and the full scope of the opportunity, Sailvan can refine each brand's appeal and lay the groundwork for selling directly on their own sites, expanding reach and control over the brand experience.

Sailvan has asked InnoG to assist them in building a stronger foundation to enhance each brand and messaging based on a better consumer understanding of their Prime Prospect.

InnoG will accomplish this through a 3 Part Research Informed Process for each of these three brands:

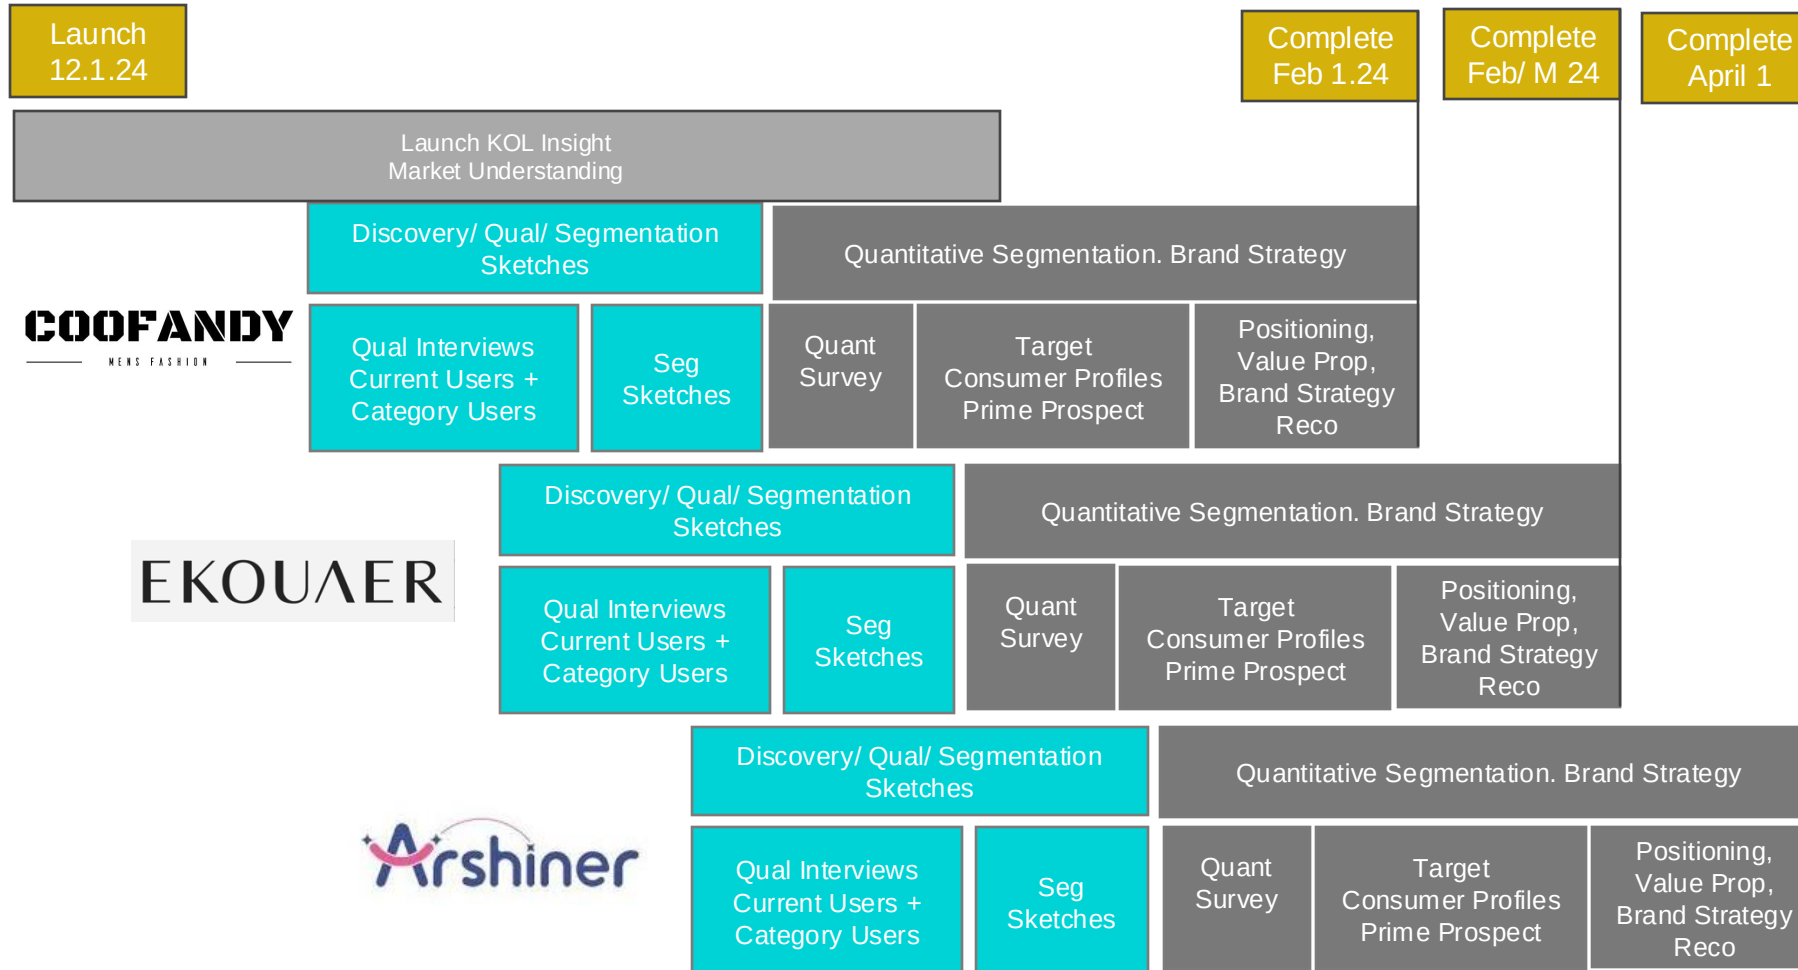

Part 1: Sailvan Understanding: Stakeholder and KOL Interviews,

Part 1: Qualitative: Category & Competitive Analysis, Research Stimulus, User/Target interviews, Segment Sketches.

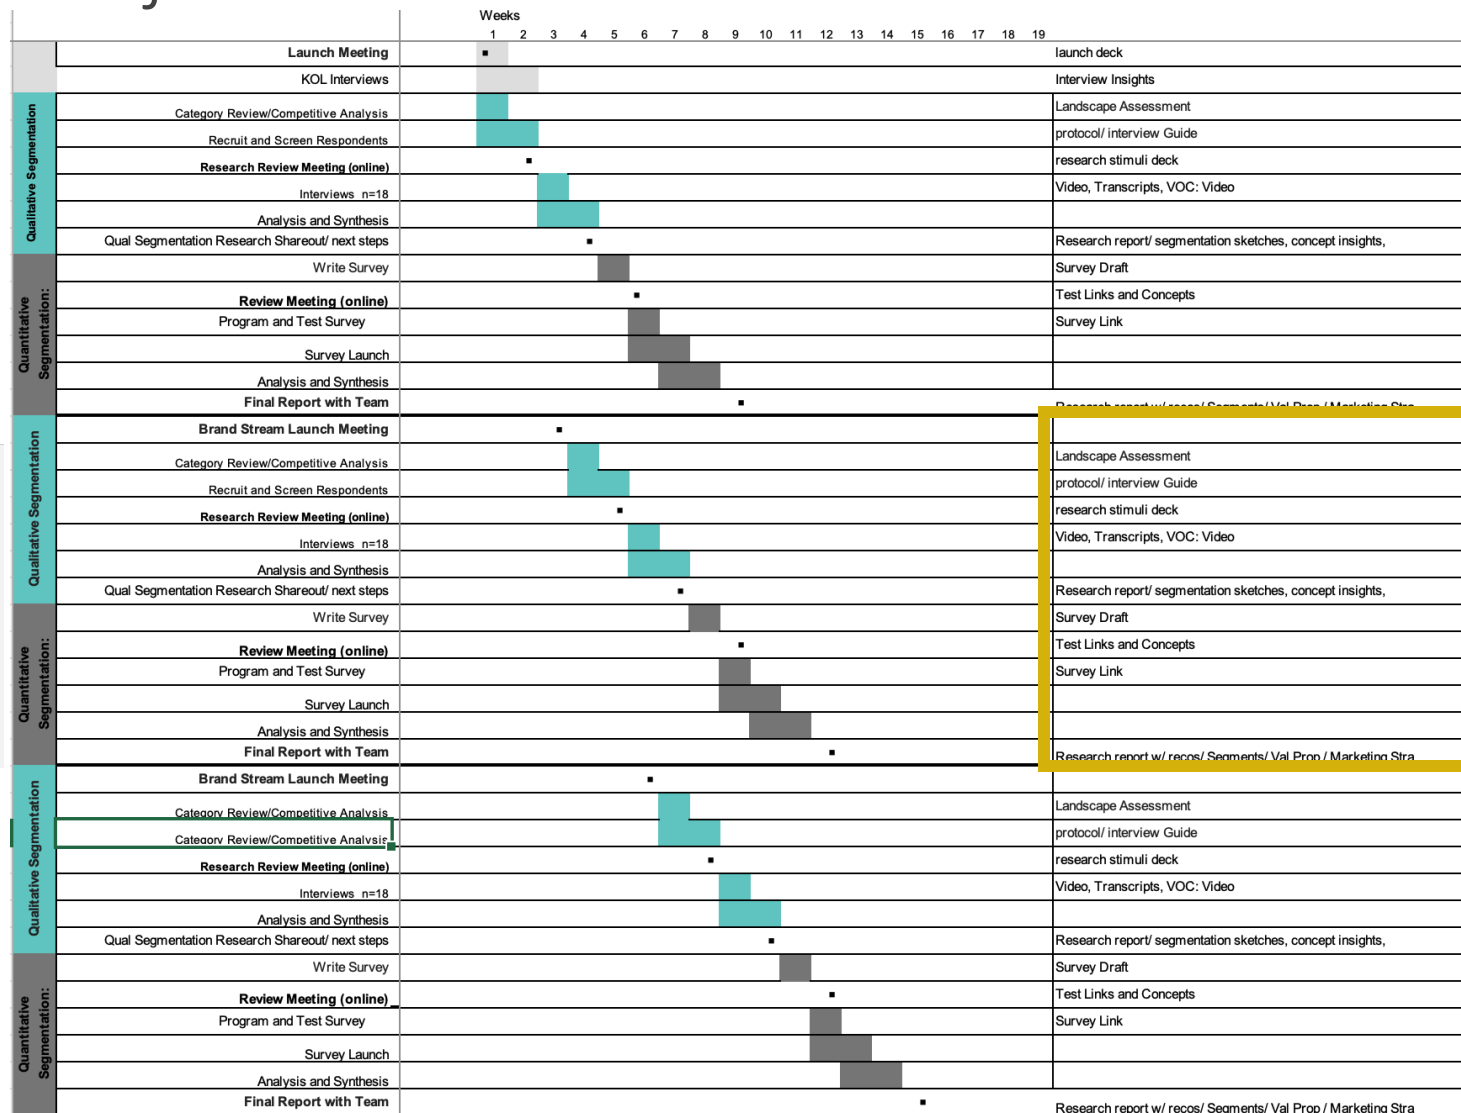

Phase 2: Quantitative: Survey, Analysis and Synthesis, Segmentation, Prime Prospect, Refined Value Proposition, Branding Strategy

InnoG recommends sequencing these brand analyses, we can gain focused insights for each, applying learnings from one brand to strengthen the approach for the next—making each strategy more targeted and effective.

Qualitative Segmentation Sketches

Segmentation is about identifying factors or traits that can be used to help group people (customers). Qualitative research and the insights it generates are an excellent way to identify strategic directions for segmentation strategies and understanding the brand's equities within those segment.

This study will be designed to gather key information across all four segmentation types:

Demographic
Geographic
Psychographic
Behavioral

We will conduct discovery research to inform the sketches:

- Competitive Analysis (3 to 4 competitive brands)
- Stakeholder Interviews
- Consumer Interviews (recruit from: Brand Social Channels and Respondent.io)
 - Brand Users :n= 8 (Amazon, TikTok and Brand site shoppers)
 - GenPop Category User: n= 8(Amazon, TikTok and Brand site shoppers)
 - (Males and Women who shop for partners for Coofandy, Females for Ekouaer and Moms and Grandmoms for Airshiner)
